Deep Learning in age prediction for MRI brain images

Using convolutional neural network to predict age with 14,503 MRI brain images in UK Biobank dataset. Exploring biological and pathological meaning of brain age.

Keeping world record of brain age prediction accuracy. Won first places for all of the two awards in Brain Age Prediction Challenge (PAC 2019. Team: BrainAgeDifference), out of 79 participating teams worldwide. Manuscripts under preparation. See <https://www.photon-ai.com/pac2019>

2014 – 2018 PhD Project: Electronic Properties of Quantum Materials

Advisor: Prof Yulin Chen *Clarendon Laboratory, Department of Physics, University of Oxford*

Machine learning in ARPES data analysis

Used convolutional neural network to identify the physical features in the spectrum images. The project is developed using MATLAB, Python and TensorFlow

Twisted bilayer graphene

Used Angular Resolved Photo-Emission Spectroscopy (ARPES) with Micrometre resolution to study electronic properties of twisted bilayer graphene

Data analysis software development

Led the development of data analysis system for spectrum image data processing.

There are 30 users, 4 regular contributors and 10 interns throughout the years. The work includes algorithm optimisation, data visualisation and graphic user interface building

2017

Research Intern: Data Processing in Two-photon Imaging

Advisor: Prof Kenneth Harris *Cortical Processing Laboratory, University College London*

Neuron Image Registration

Designed fast registration algorithm with register ex-vivo 2D-slices and in-vivo 3D-volume data of neuronal images with different modality and recording methods.

Analysis Pipeline Development

Developed semi-automatic MATLAB data analysis pipeline for the registration algorithm. The pipeline includes data I/O, cell detection, registration, result visualisation and manual modification interface. Project GitHub page: <https://git.io/vAjk4>
